5. NEX Error Descriptions

Error code	Description
106-0102	The reason for the error is unknown.
106-0103	The operation is currently not implemented.
106-0104	The operation specifies or accesses an invalid pointer.
106-0105	The operation was aborted.

Error code	Description
106-0106	The operation raised an exception.
106-0107	An attempt was made to access data in an incorrect manner. This may be due to inadequate permission or the data, file, etc. not existing.
106-0108	The operation specifies or accesses an invalid DOHandle.
106-0109	The operation specifies or accesses an invalid index.
106-0110	The system could not allocate or access enough memory or disk space to perform the specified operation.
106-0111	Invalid argument were passed with the operation. The argument(s) may be out of range or invalid.
106-0112	The operation did not complete within the specified timeout for that operation.
106-0113	Initialization of the component failed.
106-0114	The call failed to initialize.
106-0115	An error occurred during registration.
106-0116	The buffer is too large to be sent.
106-0301	Connection was unable to be established, either with the Rendez-Vous back end or a Peer.
106-0302	The Principal could not be authenticated by the Authentication Service.
106-0303	The Principal tried to log in with an invalid user name, i.e. the user name does not exist in the database.
106-0304	The Principal either tried to log in with an invalid password for the provided user name or tried to join a Gathering with an invalid password.
106-0305	The provided user name already exists in the database. All usernames must be unique.
106-0306	The Principal's account still exists in the database but the account has been disabled.
106-0307	The Principal's account still exists in the database but the account has expired.
106-0308	The Principal does not have the Capabilities to perform concurrent log ins, i.e. at any given time only one log-in may be maintained.
106-0309	Data encryption failed.
106-0310	The operation specifies or accesses an invalid PrincipalID.
106-0311	Maximum connection number is reached
106-0501	The reason for the error is unknown.
106-0502	Network connection was unable to be established.
106-0503	The URL contained in the StationURL is invalid. The syntax may be incorrect.
106-0504	The key used to authenticate a given station is invalid. The secure transport layer uses secret-key based cryptography to ensure the integrity and confidentiality of data sent across the network.
106-0505	The specified transport type is invalid.
106-0506	The Station is already connected via another EndPoint.
106-0507	The data could not be sent across the network. This could be due to an invalid message, packet, or buffer.
106-0508	The operation did not complete within the specified timeout for that operation.
106-0509	The network connection was reset.
106-0510	The destination Station did not authenticate itself properly.
106-0511	3rd-party server or device answered with an error code according to protocol used e.g. HTTP error code
